

README V2 FOR VRSOFT1 V1.3 SOFTWARE FOR VR2240

1. Minimum requirement for running VRSOFT1 V1.3 is Microsoft Windows XP running .NET Framework 1.1 and Microsoft Internet Explorer 6, with 256MB RAM and 150MB min free disk space for complete installation of software.

Version of Windows

This software can run on Windows 2000, Windows 2003, Windows XP, Windows XP Home, Windows XP Professional and Windows XP N. In general with later versions of Windows or Windows with Service Packs, more RAM may be needed (256MB min).

The product may also work with Windows 98 SE edition and Windows ME procured before 11 July 2006. However, Microsoft have dropped support for these versions of Windows operating systems as of 11 July 2006 and therefore no support is offered.

2. You do not need to change your default web browser if you use web browser other than Internet Explorer.

3. The installer will attempt to upgrade Internet Explorer To Internet Explorer 6, and install .NET Framework 1.1 before attempting to install VRSOFT1. Reboots may be required between steps depending on your machine. The installer may need to be run again after each package has been installed until all steps are completed and the VRSOFT1 software has been installed.

4. The installer will run automatically on inserting the CD into a PC. If that feature is disabled on your PC, double click setup.exe on the CD to run the installation program manually.

5. To repair or remove the application, go into Settings, run Add/Remove Software, Select VR2240, and then select Repair or Remove option and then follow instructions on screen.

6. This software is licensed to the user of the VR2240 under the terms of the license agreement. Use of the software is an acceptance of the license agreement. The license agreement is available in the installation CD.

7. Running this software under popular emulation environments such as Wine or a Virtual PC may work, however, no support is offered.
